SOURCE

1. Early in May 1952, the Zentralamt fuer Forschung und Technik (ZAFT)¹ of the DDR State Planning Commission began work on a research project concerning the development of an immersible Geiger counter (versenkbarer Geigerzähler) to be used for the investigation of the radioactivity of ground waters in the potash mines in the Stassfurt area. These ground waters are found at depths as great as 1,000 meters.
2. The above-mentioned research project is handled jointly by the Fachgebiete Physik and Metallurgie of ZAFT².
